

WV-1 Automatic Tank Drain

When was the last time you manually drained your air compressor's tank?

Routine maintenance on a compressor is essential to long life. Yet so many people forget to drain their compressor tank after every use. Leaving condensation and build up in the tank can lead to corrosion, inefficient use and reduced compressor life.

The WV-1 automatic tank drain by Conrader does all the work for you. Once installed, the WV-1 drains the tank twice during a normal compressor cycle. It is just the perfect size for small compressors (5hp and below) and it will help you avoid future problems.

The WV-1 installs within minutes on most standard compressors and will keep your compressor running dry. Try one today and see what the WV-1 can do for you!

Features:

Solid brass body construction

Screened inlet port to block contamination

1/4" tank inlet, 1/8" pressure signal inlet and 1/4" drain outlet
